

## EDA 2000 "Compact"

# CobraScan finally gets approval !!

# VOSA now accepts the use of EOBD data measurement during the MoT Emissions Test...

TEN Automotive Equipment Ltd have finally received the Certificate of Acceptance for using CobraScan during the MoT Smoke Test following concerns from VOSA that EOBD Data measurement may require some smokemeters to be fully retested. Released some months ago, the CobraScan had completed all the relevant Approvals testing required at the time but since, further testing has now been introduced to ensure that triggering from the EOBD RPM data stream does not affect the timing of smoke measurement.

“Using the EOBD Data stream enables us to reduce the manufacturing costs allowing the saving to be passed on to the customer” says Managing Director Chris Gostling. “The use of modern technology combined with internet ordering & payment gateways

such as Google Checkout, enables economy without compromise to quality.”

Supplied with Bluetooth **CobraScan** as standard the system will also provide a simple to use EOBD fault code diagnostic and “delete” solution.
